

Level of Service for Project Intersections (2056 Projections)

Traffic Analysis

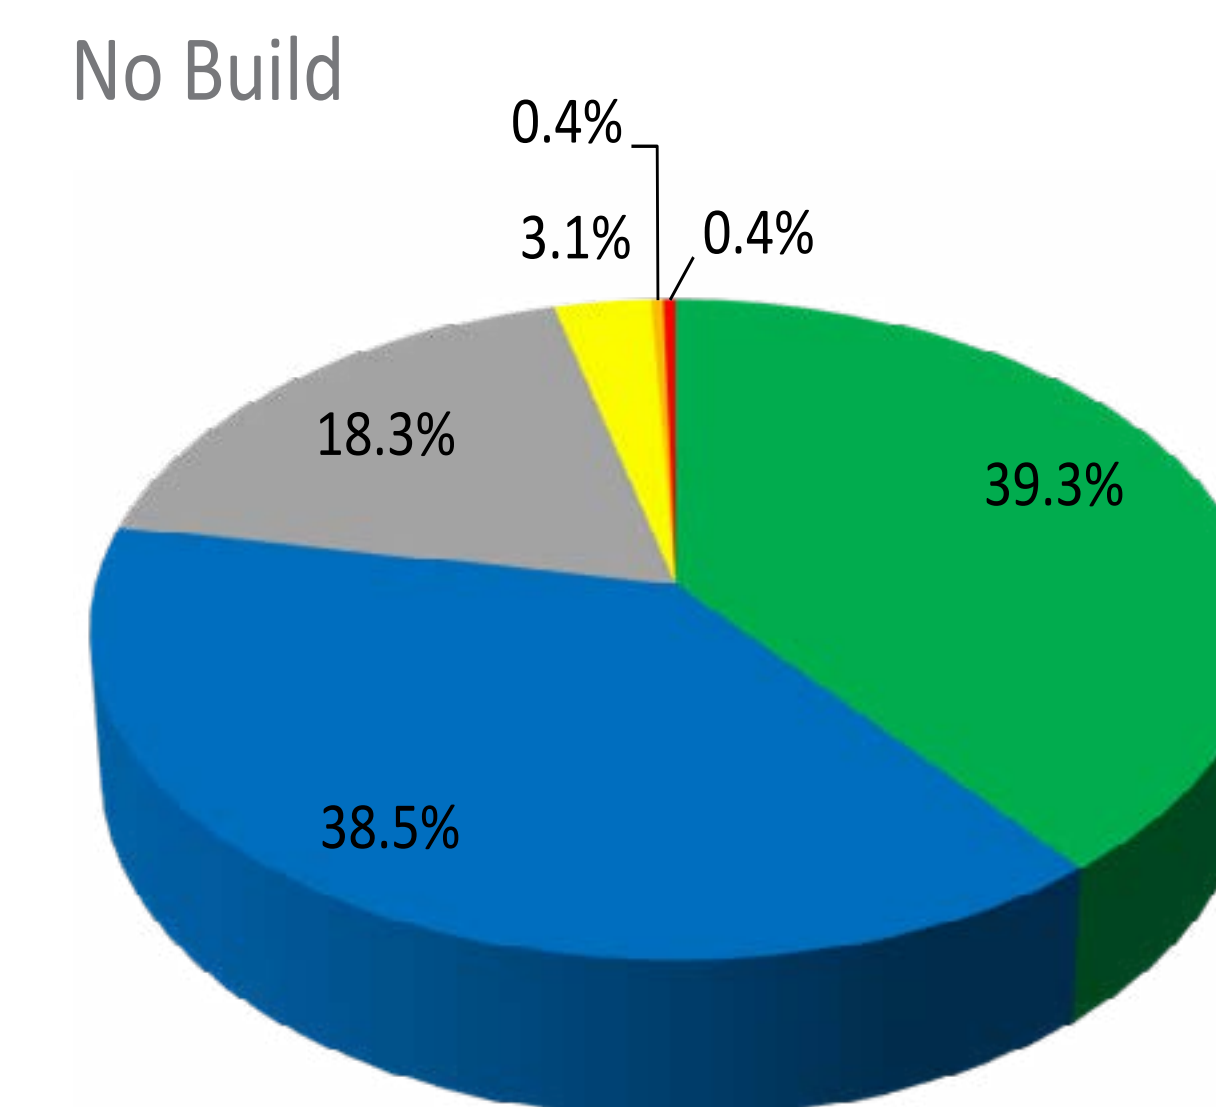

Level of Service (LOS) is an assessment of a road's operating conditions. It reflects the relative ease of traffic flow on a scale of A to F, with minimal delays rated as LOS A and congested conditions rated as LOS F.

- More than 290 intersections were analyzed
- Under the Viaduct and Community Grid Alternatives, the vast majority of intersections would operate at LOS A, B, or C, which is very good
- Less than 8 percent of intersections would operate at LOS D, well within acceptable design criteria
- No substantial differences between the Viaduct and Community Grid Alternatives
