

South Bay Road Bridge

- New bridge will be built in same location as existing bridge, and will have 12' lanes and 8' shoulders
- Prior to construction, a one-lane temporary bridge will be erected south of the existing bridge
- Temporary bridge will carry traffic while new bridge is constructed, using traffic signals to maintain alternating one-way traffic
- While the temporary bridge is in place, the temporary signals may be equipped with emergency services preemptive devices that will override the alternating one-way traffic condition
- Once the new bridge is opened to traffic, the temporary bridge will be removed
