

Sustainability: Ecological Benefits

- In final design, temporary and permanent impacts to wetlands estimated in the EIS have been reduced
- Mitigation credits have been purchased from an approved service provided to mitigate for permanent federal wetland impacts
- Project will develop restoration plan for wetland, channel, and floodplain areas to mitigate for state wetland impacts
- Project will minimize erosion and sediment impacts to surface water quality during construction

Clockwise from above: Wetland southeast of I-81 on-ramp to SB NY 481, Mud Creek, Bear Trap Creek, wetland in Contract 1 area, Mud Creek, Mud Creek
