

- For any deciduous tree over 6" DBH (diameter at breast height) that must be removed as result of the project, replacement trees at 2" DBH will be placed in quantities necessary to equal the original tree's DBH
- For evergreen trees that must be removed as result of the project, replacement trees will be planted equal to the height times the width of the original tree
- Trees will be replaced with same genus and species unless it has been identified as invasive
- The minimum replacement sizes are as follows:
 - 2-inch caliper for major deciduous trees
 - 1.5-inch caliper for minor deciduous trees
 - 6-foot height for coniferous trees
 - 3-foot height for deciduous shrubs
 - 2-foot height for evergreen shrubs
- Tree removal: February–April 2023
- Tree replanting: Fall 2024 and spring 2025
